ENTERPRISE DEVICE SPECS
CONNECTIVITY AND INSTALLATION REQUIREMENTS

DEVICE

- 1 Media Player
- 1 Plug In Power Supply (5ft)
- 1 USB C Power Cord
- 1 (3.5 mil) Aux-to-RCA Cord (6ft)
- 1 Purple Ethernet Cord (10ft)

Vibenomics, a Mood Media company provides the items listed above and recommends that the Vibenomics Media Player be placed within the reach of the included cable lengths to the amplifier and an available Ethernet port. It can be mounted in a variety of ways, based on where it will be placed.

CONNECTIVITY

An Ethernet port configured for unfiltered access to the public Internet is required - no internal network access is needed.

- Only one port per Media Player is required on the router, switch or panel
- IP address assigned by DHCP
- Recommend VLAN configuration if needed to isolate Media Player traffic

The Host Network locations will need to provide a working sound system (amplifier and speakers) that can clearly be heard on the sales floor.
- The Media Player will need to connect to the system's amplifier through a standard audio connection (ex. Aux to RCA)

INSTALLATION

For initial roll-outs a Mood Media Field Service Technician may install the Media Player(s). In these cases the Media Player is shipped directly to the technician. The dispatched Field Service Technician will be responsible for the following activities:

- Installing the new Media Player
- Connecting the included Ethernet cable to a designated port. If a longer cable run is needed that can be worked out with the Mood installation team.
- Complete an Audibility Checklist to validate sound quality throughout the store
- Obtain 'Manager On Duty' sign off

For self-self installations the Media Player will be shipped as instructed by the retailer. If it is shipped directly to the store please advise stores not to open the Media Player box. They should secure it in the back office and hold it for the designated installation technician.
